

Class Problem 6: Countdown Timer

- **Step 1:** Ask the user to enter the number of seconds
- **Step 2:** Write a **for**-loop that counts from the given number down to 0
 - Hint: Change the step in `range(start, end, step)`
- **Step 3:** For every iteration of the loop, print the remaining seconds and wait for 1 second with the `sleep` function from the `time` module
- **Step 4:** Print a final message after the timer hits 0
- Finally, submit the file to Canvas
