

Class Problem 18: Letter frequency

- Count the number of times each character appears in the input and print the resulting frequency dictionary

```
frequency = {}  
for char in input():  
    ...  
print(frequency)
```

- Example:

```
> introduction
```

```
< {'i': 2, 'n': 2, 't': 2, 'r': 1, 'o': 2,  
   'd': 1, 'u': 1, 'c': 1}
```

- Finally, submit the file to Canvas
